

Usage Guidance

Candle Wax Dye

Application

1. Use scales to weigh out the quantity of dye required.
2. Dissolve the dye in wax.
3. Mix thoroughly until the dye flakes are completely melted into the wax.
4. Pour the mixture into a pouring jug.
5. Check that the colour is correct before pouring. The mixture will produce a lighter shade once set.

Dosage

Use the Candle Wax Dye flakes at a ratio of 1g Dye per 100g Wax. The dye can be used in natural wax but will create a lighter shade and a larger concentration of dye should be used.

Storage

Store the dye flakes in a cool, dry location out of direct sunlight.
